Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 5, 6, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Joo et al (US 5708321).

Art Unit: 2879

Regarding claim 1-2, 5, 6, and 9, Joo discloses a vacuum tube (lines 7-9 of column 1) having an oxide cathode (figure 1) comprising a cathode base of a cathode metal (2), a cathode body with a cathode coating of an electron emitting material (1) comprising an alkaline earth oxide (line 4 of abstract). The alkaline earth oxide is lanthanum-magnesium-manganese oxide.

Claims 1-3, 7, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Derks (EP 0373701).

Regarding claims 1-4, 7, and 9, Derks discloses an oxide cathode (sole figure) for use in vacuum tube comprising a cathode base metal (7) and an electron emitting material (2) comprising an alkaline earth oxide BaO SrO: see abstract). Note, only one of the element is required by claims). Derks also discloses addition of hafnium or zirconium.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2879

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Derks (EP 0373701).

Derks discloses all the limitations of claim 8 except quantity of atomic metal in specific range. This limitation is not deemed patentable since the applicant's disclosure fails to show such limitation to solve any problems or to yield any unobvious advantage that is not within the scope of the teachings applied. Therefore, such limitations would be a matter of design alternative. Alternatively, It would have been obvious to one having ordinary skill in the art at the time of the invention was made to obtain the claim range, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.
